

## FusionPro 5.8 - Release Notes

<b>Products</b>	FusionPro Desktop FusionPro Designer FusionPro Direct FusionPro Server
<b>Release Number</b>	5.8
<b>Release Date</b>	July 2008
<b>Customer Support</b>	For more information or support, please contact us at <a href="mailto:fusionProSupport@printable.com">fusionProSupport@printable.com</a>

### Overview

This document contains the release notes for the FusionPro 5.8 suite of Variable Data Printing solutions. The following sections describe the release in detail and provide late-breaking or other information that supplements the main documentation.

FusionPro 5.8 is a minor update to the FusionPro 5.0 release and is available as a complimentary update to all FusionPro 5.0 customers. Installation of the FusionPro 5.8 release requires the use of a FusionPro 5.0 serial number.

At the time of the 5.8 release, Printable is offering upgrade pricing for FusionPro Desktop licenses. Customers with FusionPro Desktop versions 3.0, 3.1, 3.2, 4.0, 4.1, or 4.2 are eligible for the upgrade. Visit the FusionPro Desktop store on the Printable Technologies website for additional details on how to upgrade to FusionPro Desktop 5.8.

FusionPro Direct and Server customers who are active on their support and maintenance contracts with Printable may obtain FusionPro 5.8 by contacting the Printable support team at [fusionProSupport@printable.com](mailto:fusionProSupport@printable.com) or by contacting their account manager.

Note that FusionPro Web, the Printable Web to Print solution, currently supports FusionPro 5.8 generated templates. Any FusionPro Web customer looking to take advantage of the Unicode variable text typesetting capabilities must upgrade to the FusionPro Desktop 5.8 product to utilize this new feature.

## What's New?

The 5.8 release of FusionPro includes Unicode VDP typesetting support. This extensive new feature allows for the typesetting of variable text in 8 newly supported languages including:

- Chinese
- Japanese
- Korean
- Russian
- Finnish
- Polish
- Turkish
- Greek

This is in addition to the languages which had previously been supported (the Latin-1 languages) which includes EFIGS (English, French, Italian, German, Spanish) Portuguese, Dutch, Danish, Swedish, and Norwegian among others.

Unicode data is supported in input data (except for field names), the Variable Text Editor (for both text frames and formatted text resources), and the hyphenation exceptions dictionary. Unicode text is not currently supported in FusionPro rules, color names, resource names, or within the composition dialog.

The FusionPro variable text hyphenation dictionaries have been updated to allow for the hyphenation of newly supported languages which can be hyphenated. The list of languages that the hyphenation engine can now be set to includes English, French, Italian, German, Spanish, Dutch, Russian, Finnish, Polish, Turkish, and Greek.

Additional Unicode information is available in the FusionPro User documentation.

### Obtaining FusionPro 5.8 Software

The FusionPro 5.8 installer, as well as legacy versions of FusionPro, can be downloaded from the Printable Technologies website at:

<http://www.printable.com/downloads/FusionPro>

**Please note that FusionPro 5.8 requires a 5.x specific serial number to install the application.** Serial numbers used to install FusionPro 3.x or 4.x releases will not be accepted by the 5.8 installer.

To determine if your serial number will install FusionPro 5.8, look at the first 4 digits of your serial number. If those digits end in "50" such as "FP50" or "FS50", then you have a FusionPro 5.0 serial number. If the digits are not "50" such as "FP40" or "FD32", then you do not have a FusionPro 5.0 serial number.

If you do not have a 5.0 serial number, you can purchase FusionPro Desktop 5.8 from the Printable website at <https://fusionpro.printable.com/store/>. If you are a FusionPro Direct or FusionPro Server customer, please contact the Printable support team to obtain the FusionPro 5.8 software.

## Installing FusionPro 5.8

To install FusionPro 5.8, please follow these steps:

- 1) Close Adobe Acrobat, InDesign, and QuarkXPress if they are currently running
- 2) Uninstall your current version of FusionPro. On Windows, this can be done from Add/Remove Programs. On Mac, there is an "Uninstall FusionPro" icon in the Printable installation folder to uninstall the product.
- 3) Once the un-install process is complete, launch the 5.8 installer program.
- 4) Use your 5.8 serial number when prompted during installation.
- 5) After installation, open Adobe Acrobat and verify that the "FusionPro" menu is visible. This indicates that the installation process was successful.
- 6) If you use the FusionPro barcode fonts in your VDP templates, run a "Load Fonts" process by going to FusionPro -> Advanced -> Load Fonts

If you experience any problems during installation, please contact FusionPro support at [fusionProSupport@printable.com](mailto:fusionProSupport@printable.com).
